

WHAT ARE SPECIAL EDUCATION SERVICES?

Special education services mandate specially designed instruction based on individual needs. These services are available to school-aged students who have been identified by a multi-disciplinary team evaluation.

Kensington Woods High School is committed to the identification and provision of a free appropriate public education for students with special needs in the least restrictive environment with access to the regular education curriculum. Services and placements are based on each student's Individualized Education Program (IEP).

Types of services and programs considered by IEP teams may include resource specialist support primarily in an inclusive environment, speech-language therapy, occupational therapy and access to a school social worker.

HOW DO I KNOW IF MY CHILD IS ELIGIBLE FOR SPECIAL EDUCATION SERVICES?

If your child meets state guidelines in one of the stated exceptionalities and needs specially designed instruction, he/she may be eligible for special education services. If you have concerns about your child, school personnel will meet with you to discuss your concerns and assist in clarification of the special education referral process and help determine if an evaluation is needed. For example, the eligibility process for Specific Learning Disability is outlined below:

SPECIFIC LEARNING DISABILITIES ELIGIBILITY PROCESS

The identification of Specific Learning Disabilities in CS Partners schools emphasizes the examination of the whole child. This examination is a process of data collection that includes multiple methods of assessing student performance with input from parents, teachers, instructional specialists, and school psychologists. The purpose of the evaluation is to surround the student of concern with the best and most comprehensive information possible to make valid and appropriate recommendations as to the student's eligibility for special education and, more importantly, educationally relevant recommendations for instructional strategies, supports and services. The following are essential components to be examined as part of the process of identification of a specific learning disability:

Begin with considerations of Instructional Quality: Federal law requires schools to ensure that students were provided with appropriate, evidence-based instruction that was delivered by a qualified teacher. The model begins with considerations as to the provision of quality instruction delivered by qualified teachers.

Level of Proficiency State Standards: Student progress in learning State standards is a fundamental consideration for instructional planning and for understanding student educational performance levels. The team considers the student's level of proficiency with State standards, as measured by State assessments and/or district benchmarking assessments.

Rate/Level of Progress: Data representing repeated measures of student performance provided to parents at regular intervals are required to determine the probability of a specific learning disability. Repeated measures of student rate/level of progress may include progress monitoring data, benchmark assessments, classroom assessments, or other measures that occur at reasonable intervals.

Teacher Support Team : Observation and interventions, whether formalized in school procedures or through teacher efforts to provide supplementary instruction, must be documented with attention to the fidelity of the efforts to impact student achievement.

Exclusionary Factors: Before making attributions of disability within the student, the team must consider all other factors that could explain the performance patterns and the lack of student response to instruction. The team must consider the student's progress in the context of his/her opportunity, past experiences, sensory, health, language, culture, and developmental challenges.

Diagnostic Achievement Testing: The comprehensive evaluation of the student must include normative measures to advance the understanding of why the student continues to have difficulty. The student must also be tested with an individually administered standardized achievement test to validate the samples of classroom assessment data with normative data.

Cognitive Testing: Before applying a categorical label to a student, the study of abilities must include testing of intelligence skills to identify patterns of strength and weakness that may further elucidate understanding of the student's learning difficulties.

Goodness of Fit to SLD Patterns: The test data are then analyzed relative to research-based clinical profiles of learning disabilities to determine a goodness of fit with existing models of learning disabilities. The team considers the relationships between areas of strength and area of deficit as they relate to our most current understanding of specific learning disabilities.

Lead Back to Quality Instructional Practice: The assessment must then lead to the development of educationally relevant recommendations for the student, whether determined eligible as a student with a Specific Learning Disability or not. The evaluation must lead to appropriate recommendations as to the best plan for instruction. Recommendations should not be limited to special education supports and programs but may include such recommendations as classroom accommodations or continued participation in the Teacher Support Team program.

WHAT CAN I EXPECT IF MY CHILD WITH SPECIAL NEEDS ATTENDS KENSINGTON WOODS HIGH SCHOOL?

Kensington Woods High School students who receive special education services have the same central expectations as any of their general education classmates:

- to become self-directed learners
- to identify and build on their learning strengths
- to participate actively in their own education

This is achieved by focusing on student strengths and by empowering students with strategies for broad and specific situation, such as: How can I stay organized? How can I take tests comfortably? How can I complete this homework task?

Utilizing an instructional approach that engages students by giving them real life and academic skills instead of drilling content over and over has led to an inclusive, satisfying environment.

Such tactics also create valuable self-knowledge among student who in other schools aren't often encouraged to develop it. By realizing what their strengths are, how they learn, and how they can complete tasks, they're preparing themselves for college, work, or whatever post-secondary life awaits them.
